

Do You Want To Reduce Your Help Desk And Deployment Costs By 10%?

Introducing the Power Pack That Helps Take The Guesswork Out of Diagnosing Printer Failure

Green plug is color-coded to match the port on the back of CDE printer

The LED Power Pack features indicator lights that let you know if power is reaching the printer, the power pack, or if no power is reaching the unit at all.

Green	Red	Diagnosis
●	●	Defective printer
●		Defective power pack
(no lights)		No defects (power source problem)

No longer will customer service representatives request the return of functional printers that were connected to poor power packs or defective outlets. That means shorter customer service calls and lower deployment costs resulting in higher profits for you.

P250 LED Power Pack

available exclusively through CDE Services, Inc.
